Art Unit: 1773

1. The following is an examiner's statement of reasons for allowance: the closest prior art WO'302 teaches a biaxially oriented polyethylene film comprising a microporous base layer of polyethylene, preferably MDPE or HDPE, and a cavitating agent, preferably calcium carbonate, in an amount of 1wt% to 30wt%; outer WVTR-controlling skin layers of polyethylene or ethylene-propylene copolymer or EPB copolymer; and preferably tie layers of polyethylene between the base and the skin layers. WO'302 does not teach or fairly suggest a WVTR of at least 3 grams/100 square inches/day at 38C and 100% relative humidity with the incorporation of a hydrocarbon resin in at least one of the skin layers. The Examiner further notes that Pip et al (USPN 6,534,166) and Pip et al (USPN 6,540,949), both commonly assigned to the assignee of the instant invention, teach a bioriented, multilayer polyethylene film with a high water vapor transmission rate as instantly claimed but do not teach or fairly suggest the incorporation of a hydrocarbon resin in at least one of the skin layers particularly given that the addition of a hydrocarbon resin is known to reduce WVTR values.

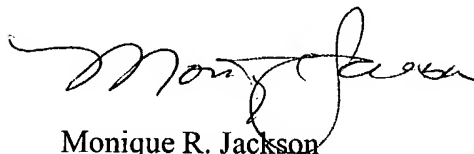

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Monique R Jackson whose telephone number is 571-272-1508. The examiner can normally be reached on Mondays-Thursdays, 8:00AM-4:30PM.
